Harvest Update

20 December 2010

GRAINCORP HARVEST REPORT

Grain receivals by operational zone.

Queensland	**1.23**
North NSW	**1.47**
Central NSW	**1.57**
South NSW	**1.35**
North West VIC	**1.03**
South East VIC	**0.3**
Total (million tonnes)	**6.95**

Overview

- Fine conditions across most of the network during the week enabled harvesting to pick up pace, and direct ex-header deliveries to the network recommenced
- Dryer conditions allowed heavy vehicles to access on-farm storage, and during the week, deliveries of grain harvested pre-rain continued
- Cool temperatures in most regions will slow the rate of drying after the weekend rain

Queensland

- Harvest is nearing completion and attention is turning to the summer crop program

Northern NSW

- Estimated 30% of the crop remains to be harvested.
- Harvesting is being slowed by intermittent showers.
- Quality continues to be better than expected, given pre-harvest conditions, and continuing damp harvest weather

Central NSW

- Rain, strong winds and cool conditions over the weekend slowed harvesting after an encouraging week
- Arrangements are being made for receivals to continue over the Christmas and New Year period

Southern NSW

- After an encouraging week of good receival volumes, harvest progress slowed over the weekend as showers, and some storms with hail, were received across the region

North Western Victoria

- With the dryer conditions that prevailed during the week, receivals increased significantly
- Harvest completion – Mallee ~50%, Wimmera ~20%

South East Victoria

- The progress of harvest continues to be slow and influenced by the damp conditions
